

TOWN OF NORTHFIELD  
SOUTH GATEWAY CORRIDOR PLAN

# Catalyst Site Concept

A VISION FOR A VIBRANT, INCLUSIVE,  
AND CONNECTED SOUTH GATEWAY.

## Catalyst Site Concept

Concept-level redevelopment framework for a key mixed-use opportunity site.

Prepared by Rachel S. Bailey, M.U.P. | September 2026

*Portfolio work product for the fictional Town of Northfield, New York.*

# 1. Site Role in the Corridor

The catalyst site is positioned to reinforce the South Gateway as a walkable, mixed-use district while connecting surrounding neighborhoods to downtown and public amenities.

## Concept Intent

Add housing and local-serving activity, improve the street edge, and contribute usable public space.

## Planning Scope

The concept establishes a planning direction that would be refined through survey, zoning, environmental, market, engineering, and ownership due diligence.

## 2. Development Program & Public Realm

The concept combines mixed-income housing, neighborhood-scale commercial space, active ground-floor uses, and a connected public realm.

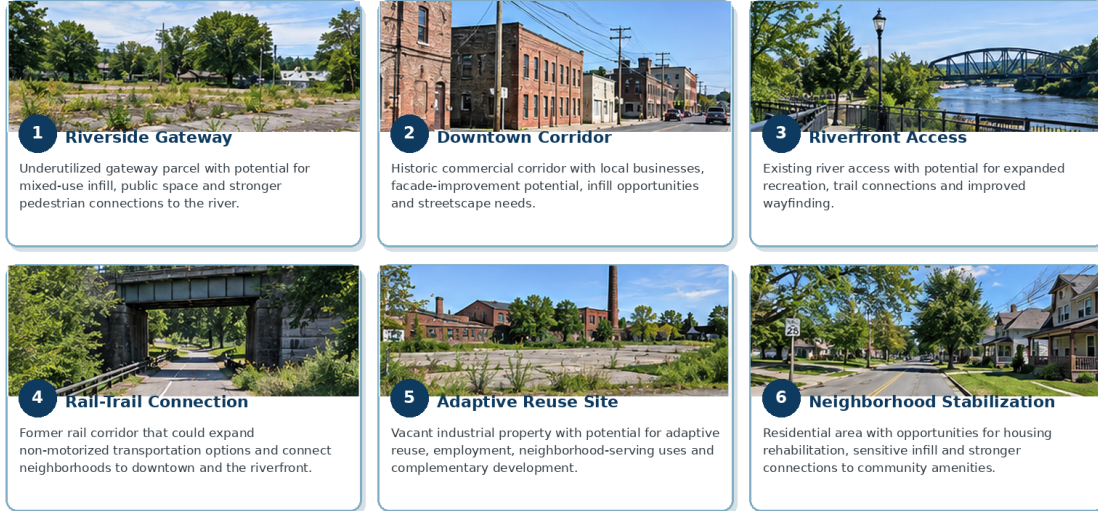

| Planning Topic | Key Finding / Direction                                                                          |
|----------------|--------------------------------------------------------------------------------------------------|
| Housing        | Mixed-income units in a compact form that supports walkability and transit.                      |
| Ground floor   | Flexible commercial or community space along the most active frontage.                           |
| Public realm   | Trees, seating, lighting, bicycle parking, and a small civic/open-space component.               |
| Access         | Safe pedestrian routes, clear vehicle access, and connections to transit and bicycle facilities. |

### 3. Urban Design Principles

The concept is guided by principles that can be tested and refined through community engagement and technical review.

#### SOUTH GATEWAY & RIVERSIDE - ILLUSTRATIVE EXISTING SITE CONDITIONS

Conceptual study areas shown with realistic site imagery for this fictional portfolio project.

Illustrative portfolio imagery - Northfield is fictional; images are concept visuals, not documented existing conditions.

#### Build to the street

Use building placement and entrances to define a comfortable pedestrian environment.

#### Create transitions

Step scale and landscape treatment toward adjoining residential areas.

#### Connect rather than isolate

Link the site to sidewalks, transit, the riverfront, and nearby destinations.

#### Design for flexibility

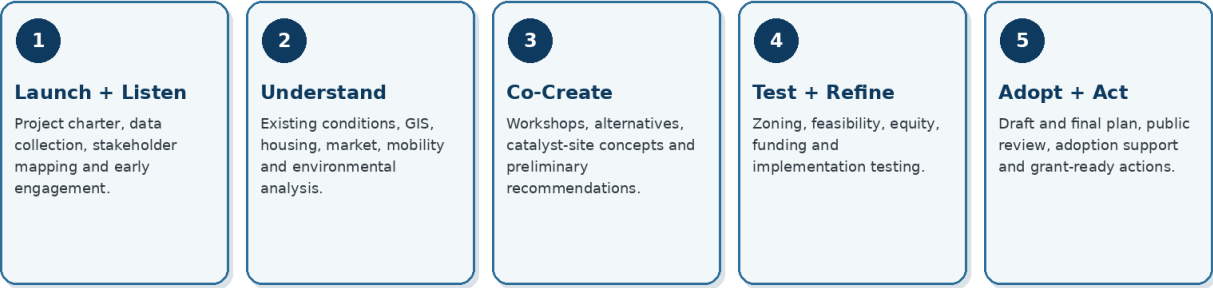

Allow ground-floor and open-space areas to adapt as neighborhood needs change.

# 4. Implementation Path

A catalyst concept becomes actionable when planning, financing, approvals, and partnerships are coordinated.

## 16-MONTH PLANNING PROCESS

A clear progression from project launch through adoption and implementation.

- Community-centered: engagement continues throughout the project.
- Data-informed: analysis is translated into practical decision tools.
- Implementation-focused: recommendations identify responsibility, timing, cost and funding.

| Planning Topic      | Key Finding / Direction                                                                 |
|---------------------|-----------------------------------------------------------------------------------------|
| 1. Due diligence    | Confirm ownership, zoning, environmental conditions, utilities, and market assumptions. |
| 2. Community review | Test development program, public-realm priorities, and neighborhood fit.                |
| 3. Predevelopment   | Advance survey, concept design, cost estimates, and funding strategy.                   |
| 4. Delivery         | Coordinate approvals, financing, construction phasing, and public improvements.         |

The catalyst site demonstrates how redevelopment can support housing choice, local economic activity, and a stronger public realm at the South Gateway.
