

TOWN OF NORTHFIELD
SOUTH GATEWAY CORRIDOR PLAN

Existing Conditions Report

UNDERSTANDING TODAY.
PLANNING FOR TOMORROW.

AUGUST 2026

Existing Conditions Report

Baseline conditions, opportunities, constraints, and planning implications.

Prepared by Rachel S. Bailey, M.U.P. | September 2026

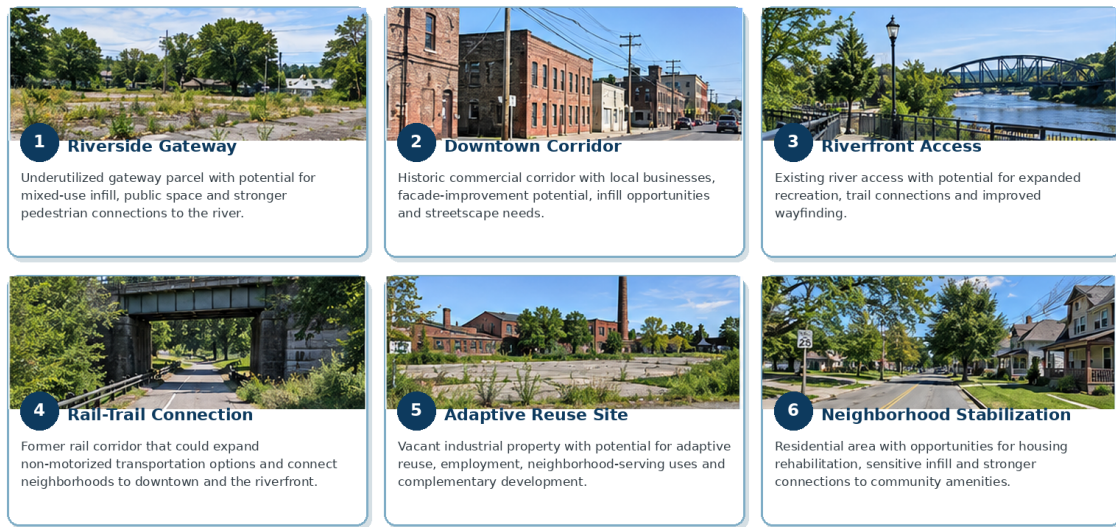

Portfolio work product for the fictional Town of Northfield, New York.

1. Study Area Context

The South Gateway study area is organized around the downtown approach, riverfront, neighborhood connectors, and redevelopment sites. The views throughout this report represent coordinated parts of the same fictional Northfield project area.

SOUTH GATEWAY & RIVERSIDE - ILLUSTRATIVE EXISTING SITE CONDITIONS

Conceptual study areas shown with realistic site imagery for this fictional portfolio project.

Illustrative portfolio imagery - Northfield is fictional; images are concept visuals, not documented existing conditions.

Planning Framework

The assessment considers land use, transportation, housing, environmental conditions, community assets, and redevelopment potential together.

Key Opportunity

The corridor can become a stronger gateway to downtown while improving access among neighborhoods, the riverfront, businesses, and public spaces.

2. Land Use, Housing & Development Pattern

The corridor includes established residential blocks, underused commercial properties, civic destinations, and sites with potential for mixed-use reinvestment.

Planning Topic	Key Finding / Direction
Land use	Mixed residential, commercial, civic, and open-space uses create opportunities for better connections.
Housing	Preserve neighborhood stability while adding mixed-income options near services and transit.
Commercial activity	Support existing businesses and focus new activity at walkable nodes.
Catalyst sites	Prioritize underused parcels where redevelopment can reinforce the corridor without displacing existing residents.

3. Mobility, Public Realm & Environment

Transportation and public-realm improvements should make the corridor safer and more legible for pedestrians, cyclists, transit riders, and drivers.

Mobility

Key needs include safer crossings, continuous sidewalks, bicycle connections, transit access, and clearer links to downtown and the riverfront.

Public Realm

Street trees, lighting, seating, wayfinding, and green infrastructure can strengthen identity and resilience.

Riverfront

Access improvements should connect the corridor to riverfront destinations while respecting environmental constraints.

4. Findings & Planning Priorities

The existing-conditions review points to a focused set of priorities that carry forward into concept development and implementation.

Planning Topic	Key Finding / Direction
Connectivity	Close pedestrian and bicycle gaps and strengthen cross-corridor connections.
Equitable reinvestment	Pair redevelopment with housing choice, local-business support, and neighborhood stability.
Gateway identity	Use streetscape, wayfinding, and public-space improvements to create a recognizable South Gateway.
Implementation	Sequence near-term public-realm actions with longer-term redevelopment and funding strategies.

Planning direction: connect people, places, and opportunities through coordinated land-use, mobility, housing, public-realm, and implementation strategies.
