

TOWN OF NORTHFIELD
SOUTH GATEWAY CORRIDOR PLAN

GIS & Data Analysis Map Book

DATA-DRIVEN INSIGHTS FOR
A STRONGER, MORE CONNECTED
NORTHFIELD.

GIS & Data Analysis Map Book

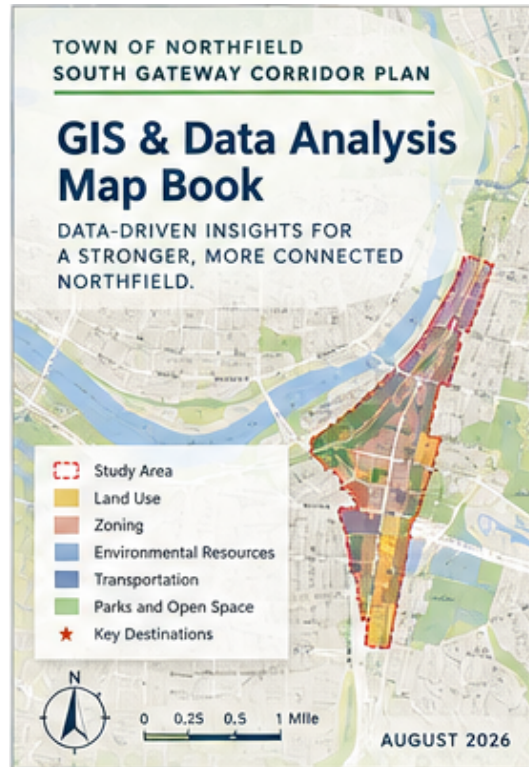

Spatial analysis supporting corridor priorities and concept development.

Prepared by Rachel S. Bailey, M.U.P. | September 2026

Portfolio work product for the fictional Town of Northfield, New York.

1. Mapping Framework

GIS analysis organizes the project area into a common spatial framework for land use, transportation, environmental resources, redevelopment opportunity, and community assets.

Study Area

Mapping focuses on the South Gateway corridor and its relationship to downtown, the riverfront, adjoining neighborhoods, and key destinations.

Use of Data

Maps identify patterns and relationships that inform planning decisions and guide follow-up field and technical review.

2. Land Use & Opportunity Areas

The land-use analysis highlights where existing patterns are stable and where underused sites may support reinvestment.

Planning Topic	Key Finding / Direction
Stable areas	Established residential and civic areas where reinvestment should reinforce neighborhood character.
Mixed-use nodes	Locations where housing, services, and commercial activity can be concentrated.
Opportunity sites	Underused parcels suited to further feasibility, ownership, environmental, and market review.
Open space	Riverfront and greenway assets that can anchor connectivity and placemaking.

3. Mobility & Connectivity

The corridor functions as both a gateway and a neighborhood street, so mapping considers movement across modes and connections between destinations.

Pedestrian network

Prioritize missing or uncomfortable connections, crossings, and access to civic and commercial destinations.

Bicycle network

Connect the corridor to greenway and riverfront routes with facilities appropriate to street context.

Transit access

Coordinate stops, crossings, sidewalks, and nearby development so transit is easier to reach and use.

4. Environmental & Community Assets

Environmental constraints and community assets shape where and how investment should occur.

Planning Topic	Key Finding / Direction
Environmental resources	Integrate floodplain awareness, stormwater management, tree canopy, and green infrastructure into project design.
Community assets	Connect schools, civic spaces, businesses, parks, and riverfront destinations.
Equity lens	Use demographic and housing information to test whether investments improve access and opportunity.
Next step	Advance priority locations to concept planning, community review, and implementation screening.
